

Course map: one pattern, four passes

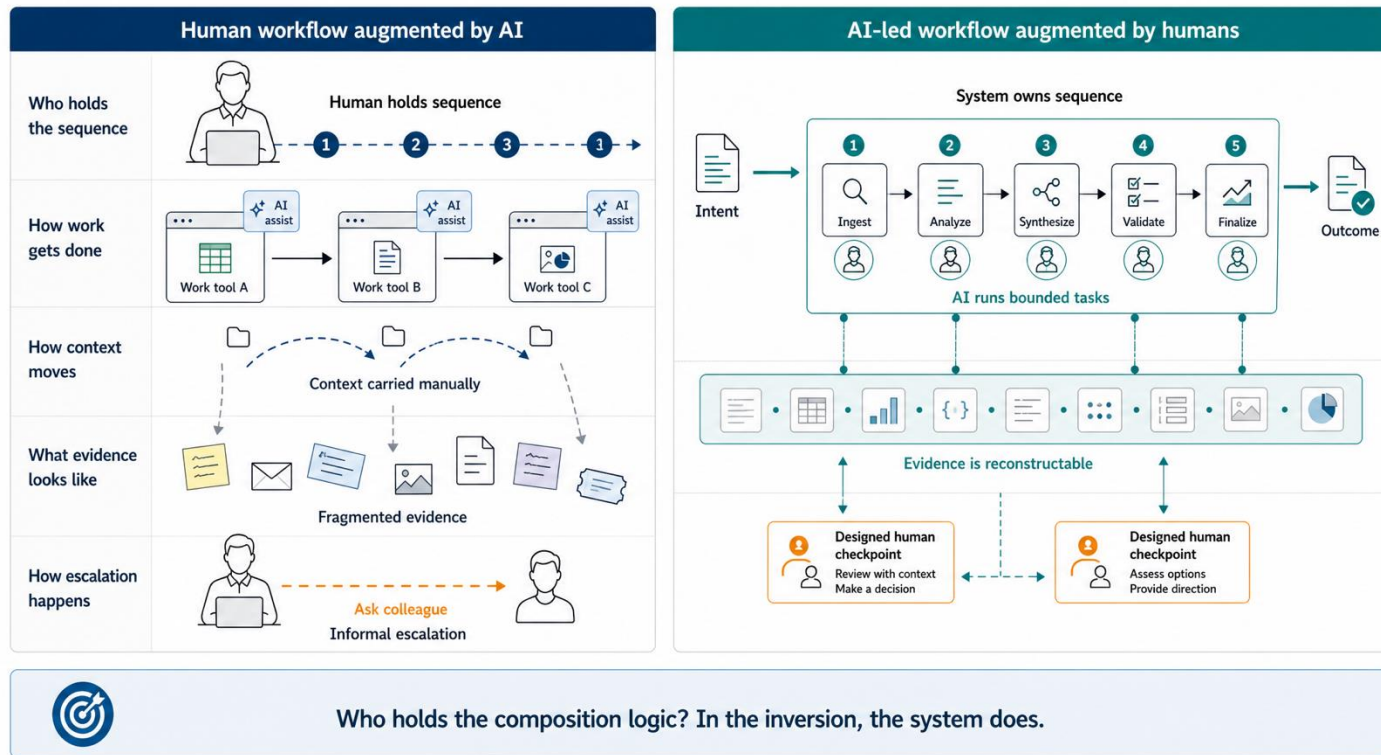

Local acceleration vs system throughput

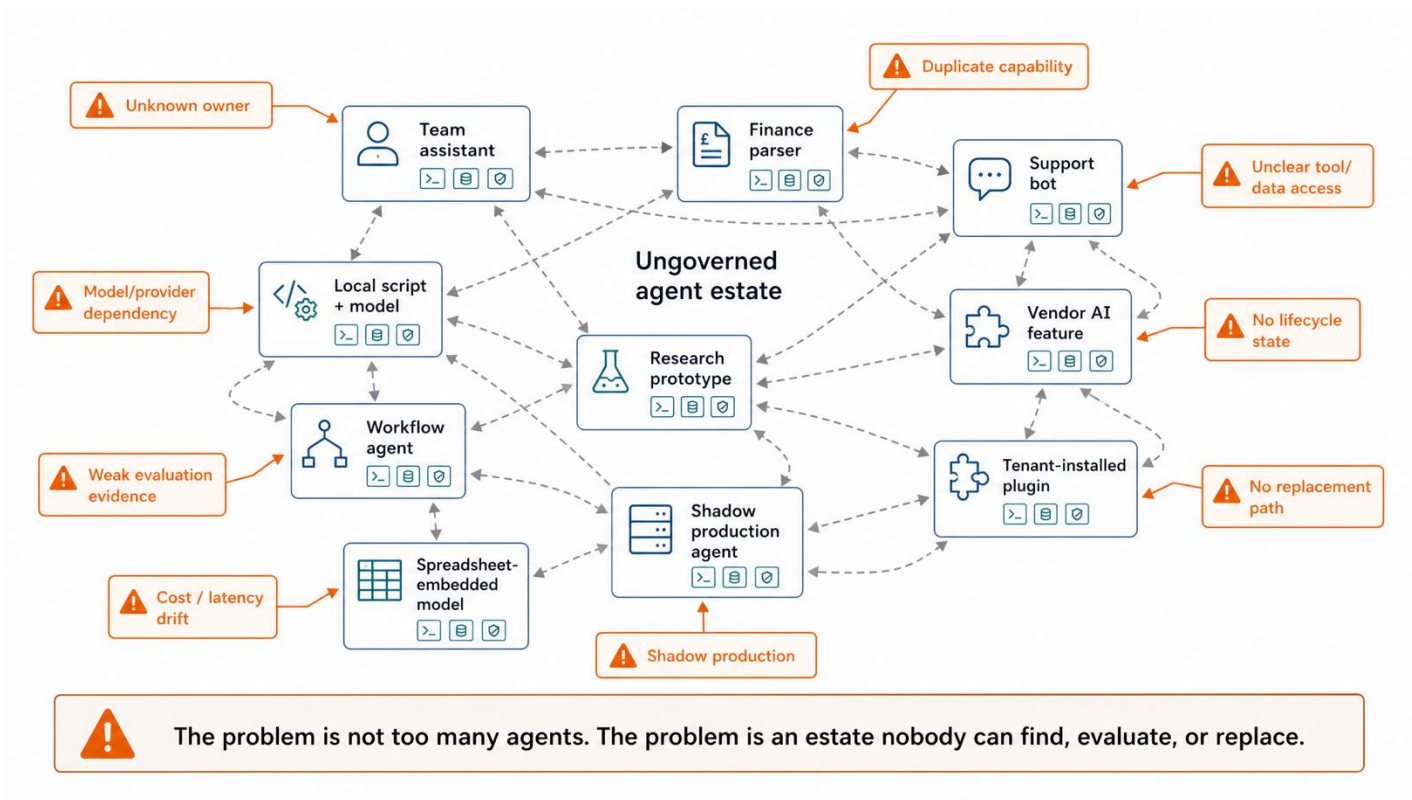

Faster local tasks can increase WIP if the active constraint is elsewhere.

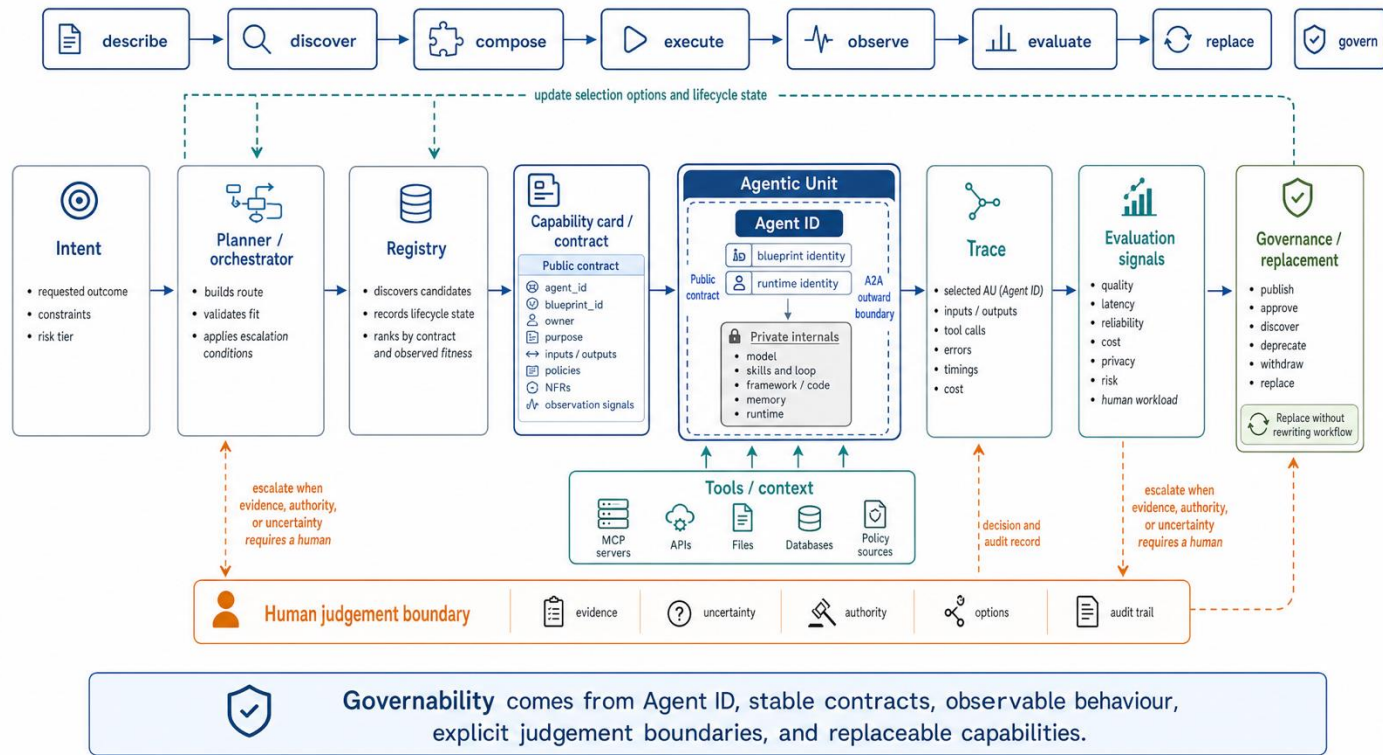

Agentic inversion: where composition lives

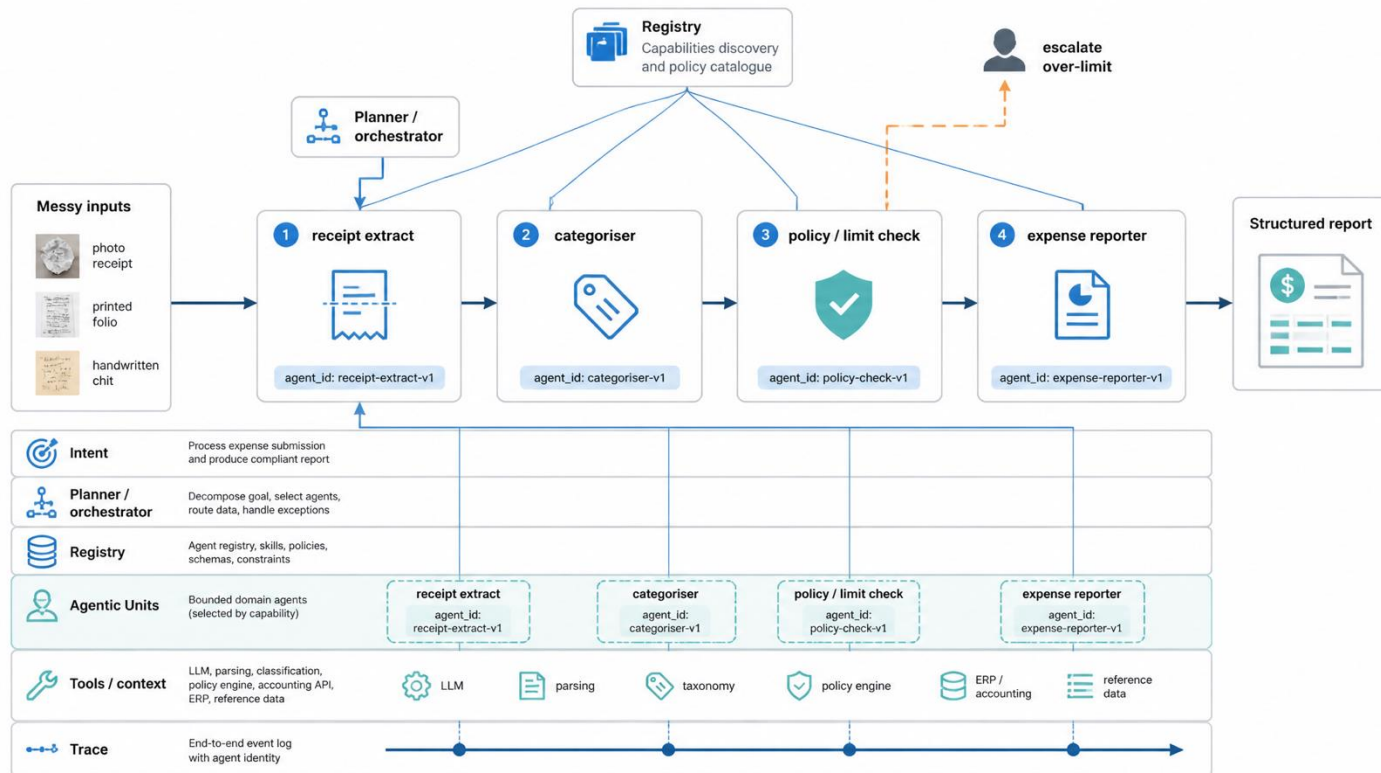

Agent sprawl: the new fleet-level problem

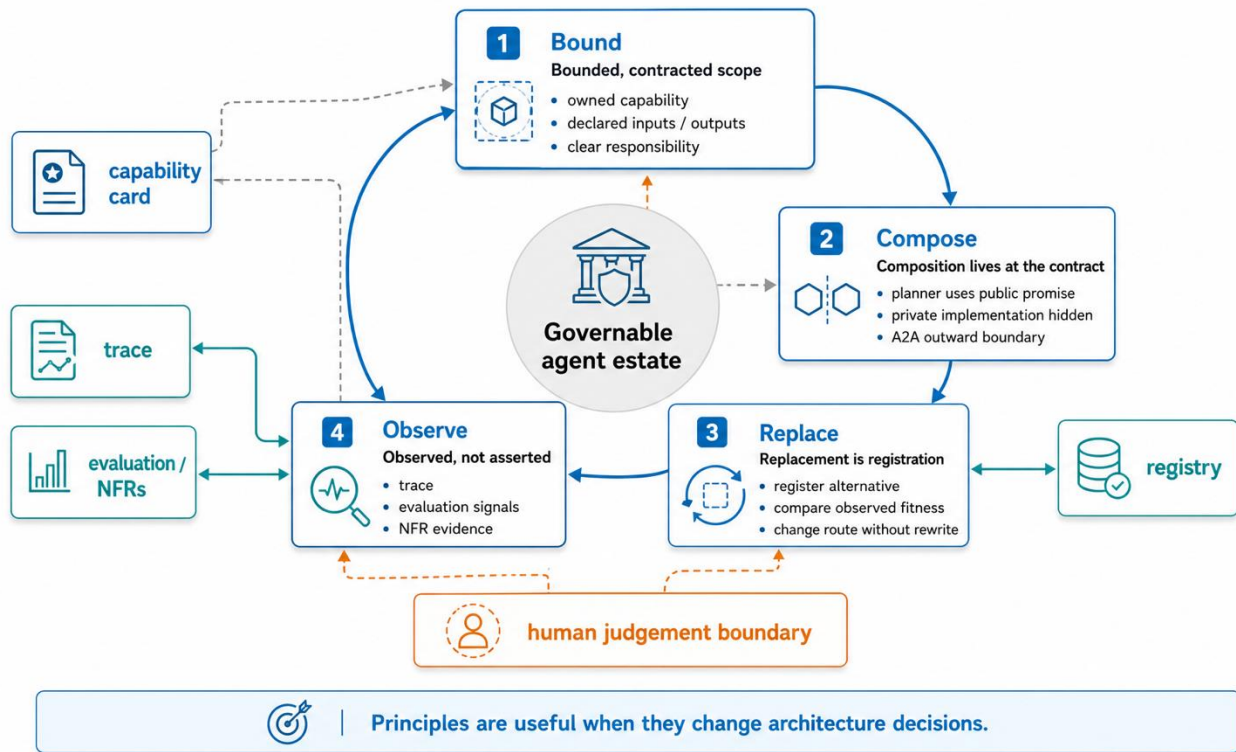

Welcome to AOA

Demo: expense report from scanned receipts

Four AOA principles

You can now see the shape

Question	What you now know	Evidence
1 Where is the boundary?	Narrow units make responsibility visible.	extract · categorise · policy check · report
2 What is the public promise?	Cards let discovery and planning happen before execution.	registry lookup + proposed route
3 What would replacement take?	Callers depend on capability slots, not hidden wiring.	four replaceable units
4 What does the evidence say?	Trace and escalation expose the real run.	over-limit human boundary
Handoff Next: open the running system, name every part, then run the shape in two domains.
