

Course map: pass 4 of 4 — Apply

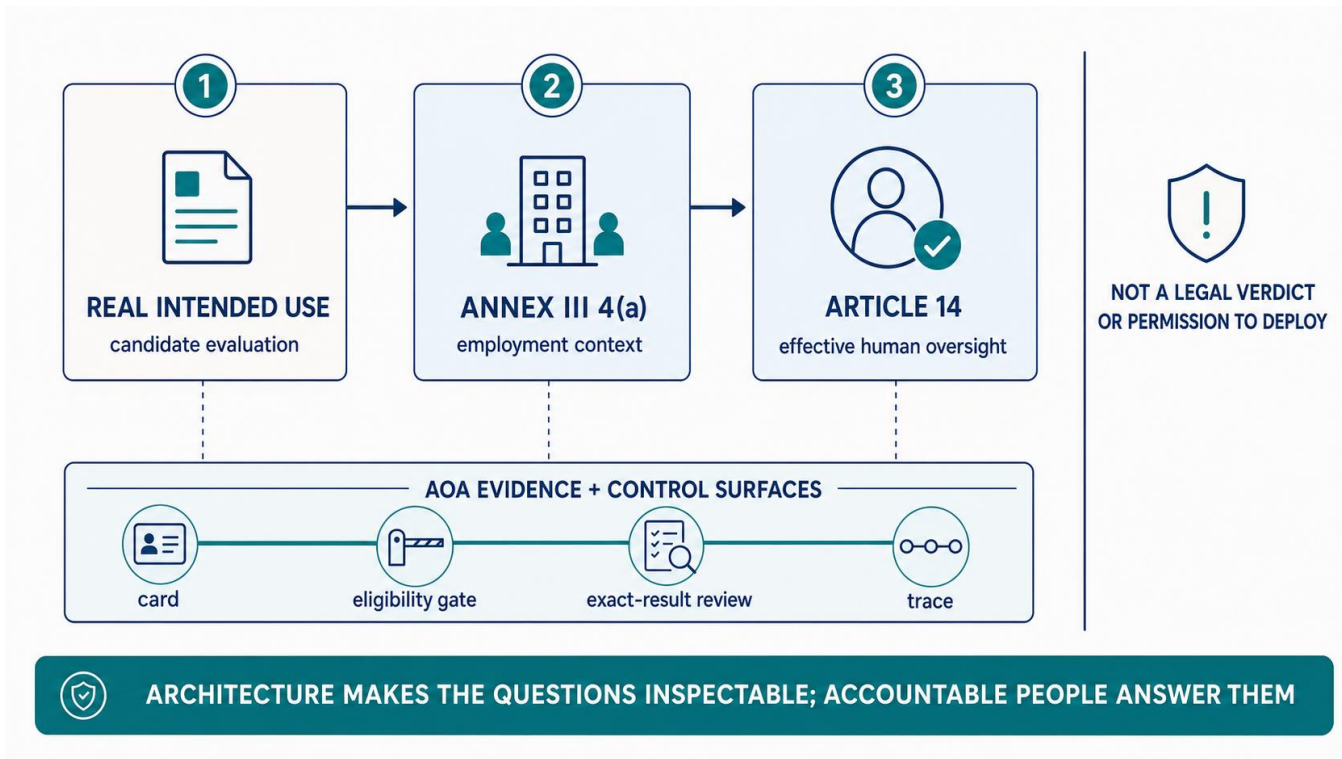

Governance is part of applying AOA

LEGAL ACCOUNTABILITY REMAINS EXTERNAL

GOVERNABILITY IS DESIGNED INTO THE PATH – NOT ADDED AFTER THE OUTPUT

The regulation is not your enemy

Sources: Regulation (EU) 2024/1689, Annex III 4(a) and Article 14; European Commission AI Act implementation guidance.

Hands-on: make one result governable

DECLARATION ≠ CONTROL ≠ EVIDENCE ≠ LEGAL VERDICT

MAKE THE GOVERNANCE PATH INSPECTABLE

The lab is evidence, not the roadmap

THE LAB DEMONSTRATES

inspectable constraints

decision before action

review of the actual result

observed release or quarantine

IT DOES NOT ESTABLISH

legal classification

effective oversight

production readiness

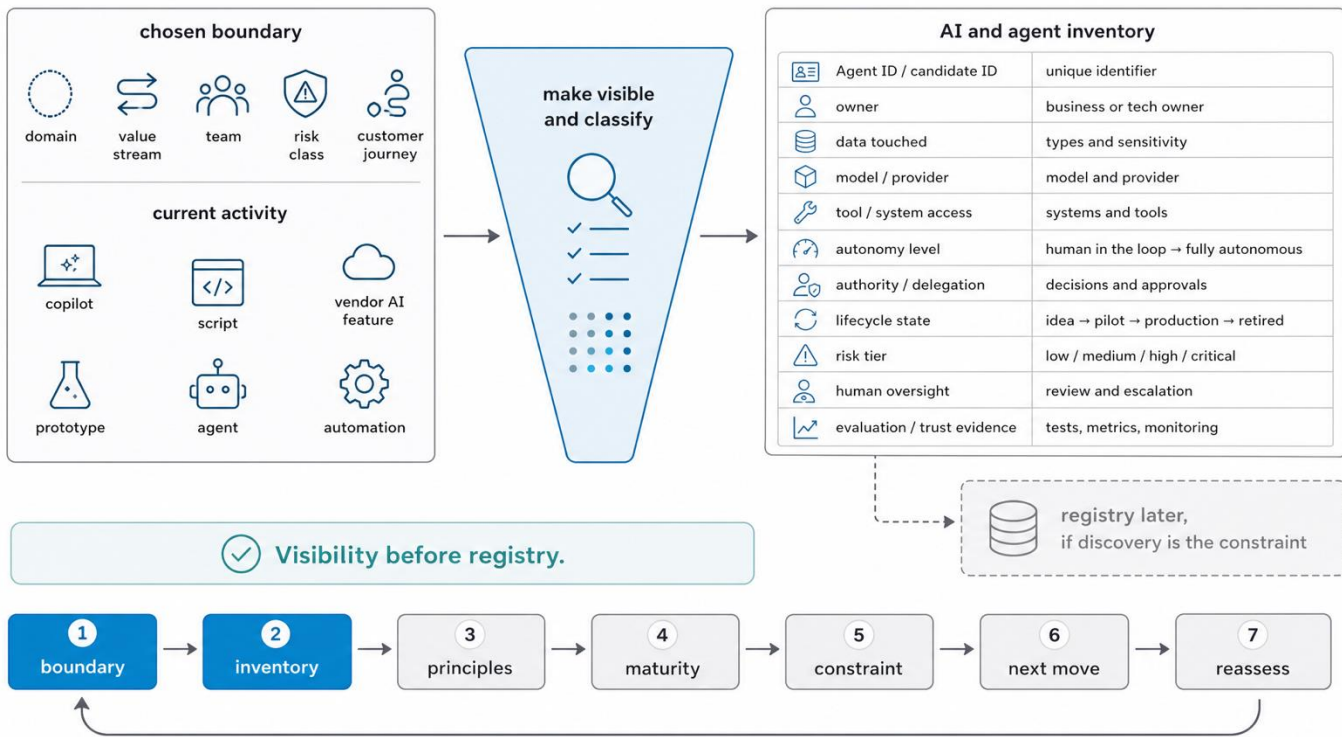

organisational roadmap

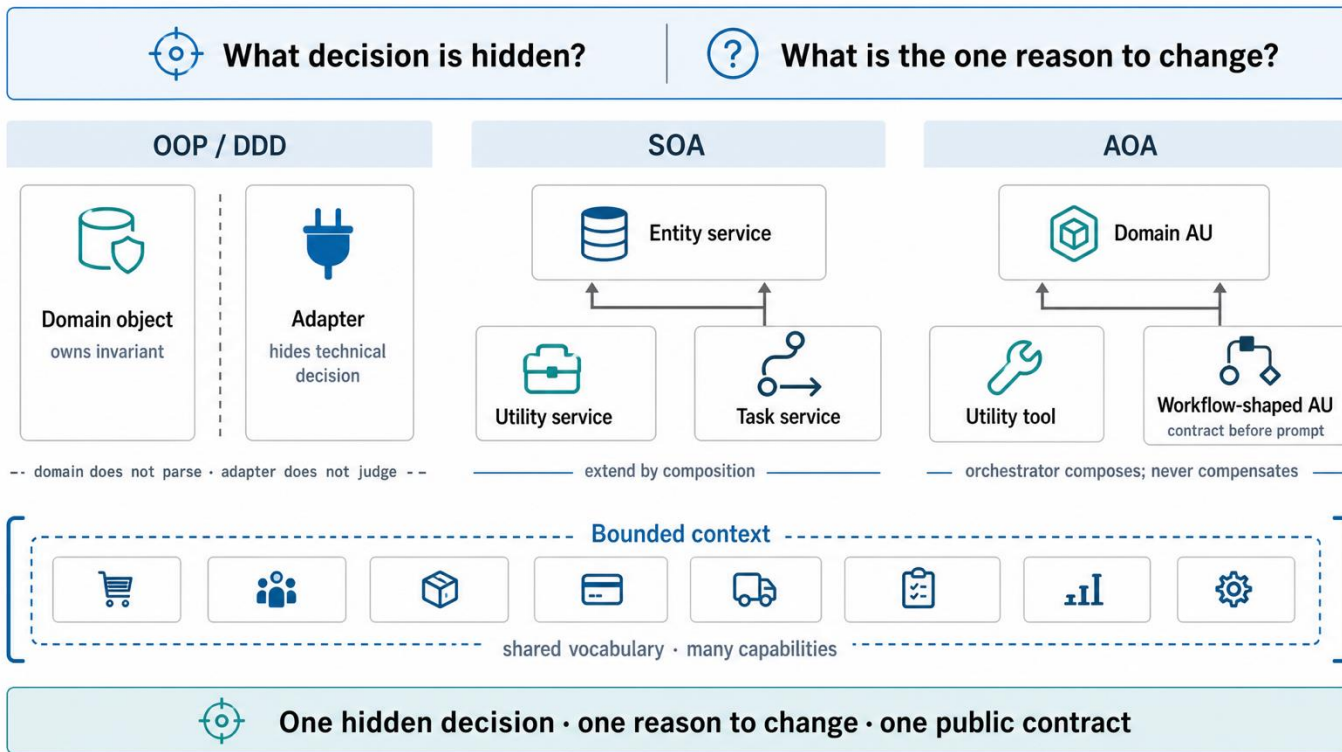

APPLY THE CONTROL DISCIPLINE – NOT THE DEMO BLUEPRINT

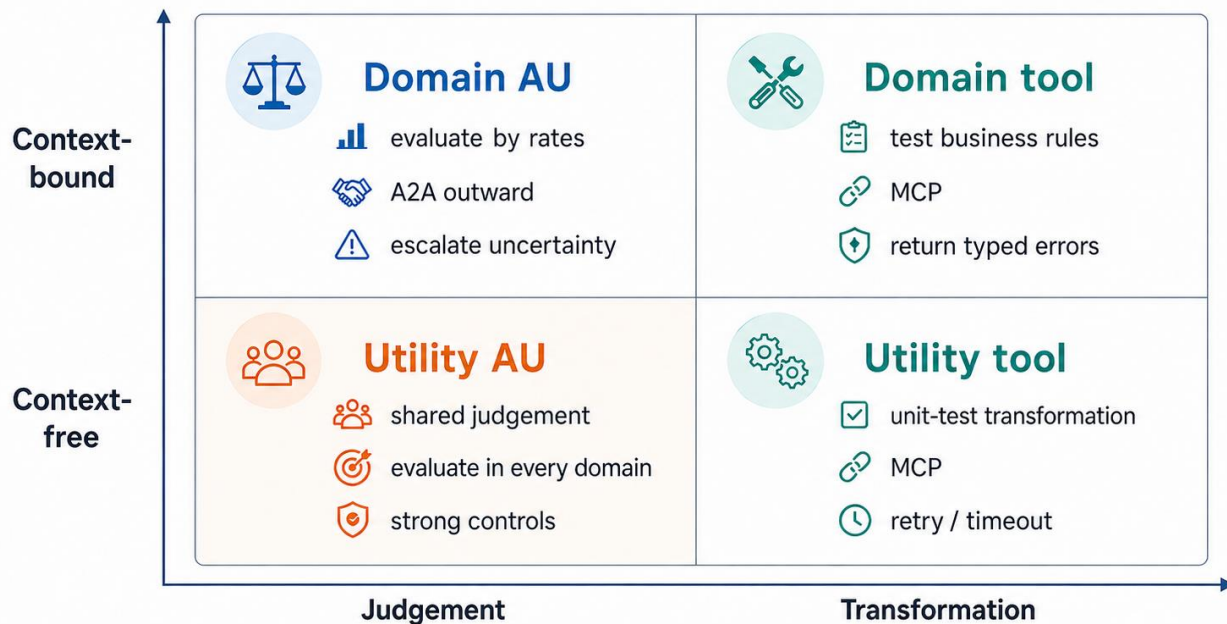

Pick a boundary; inventory what exists

A boundary hides one change

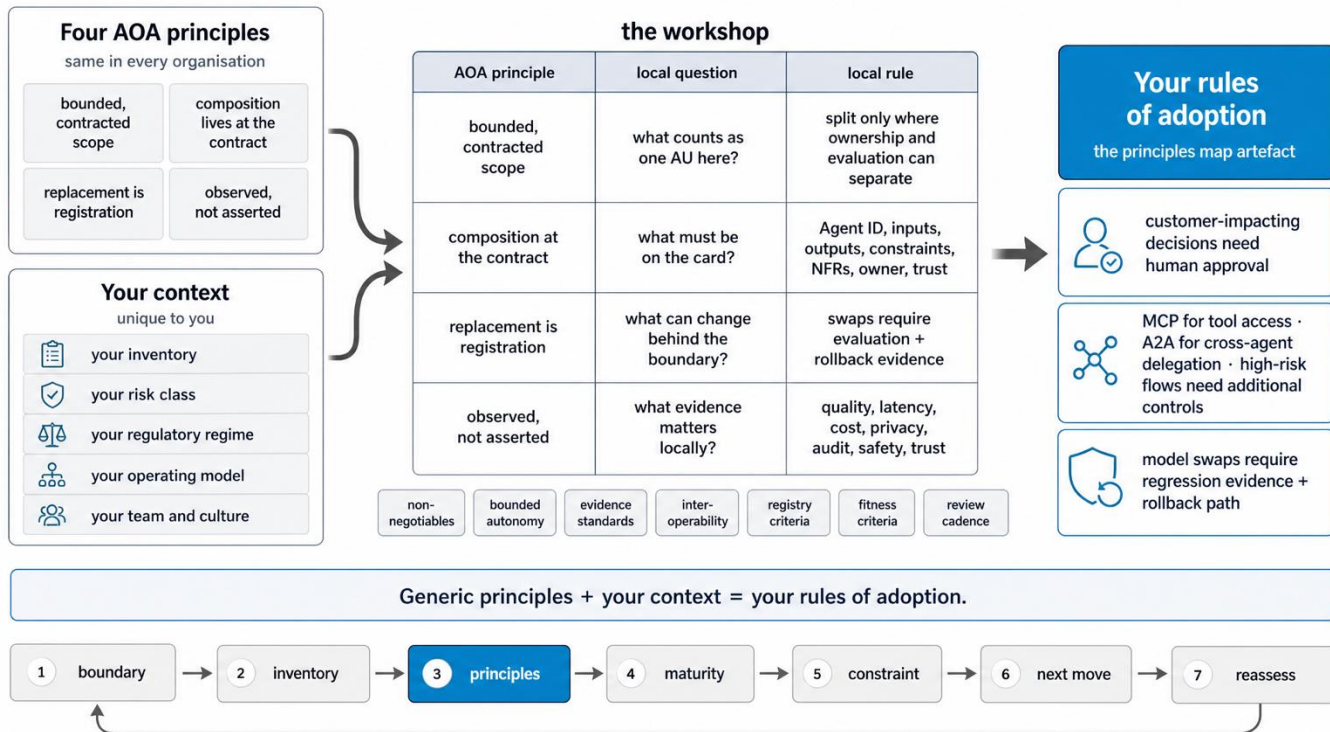

Classification changes how you govern it

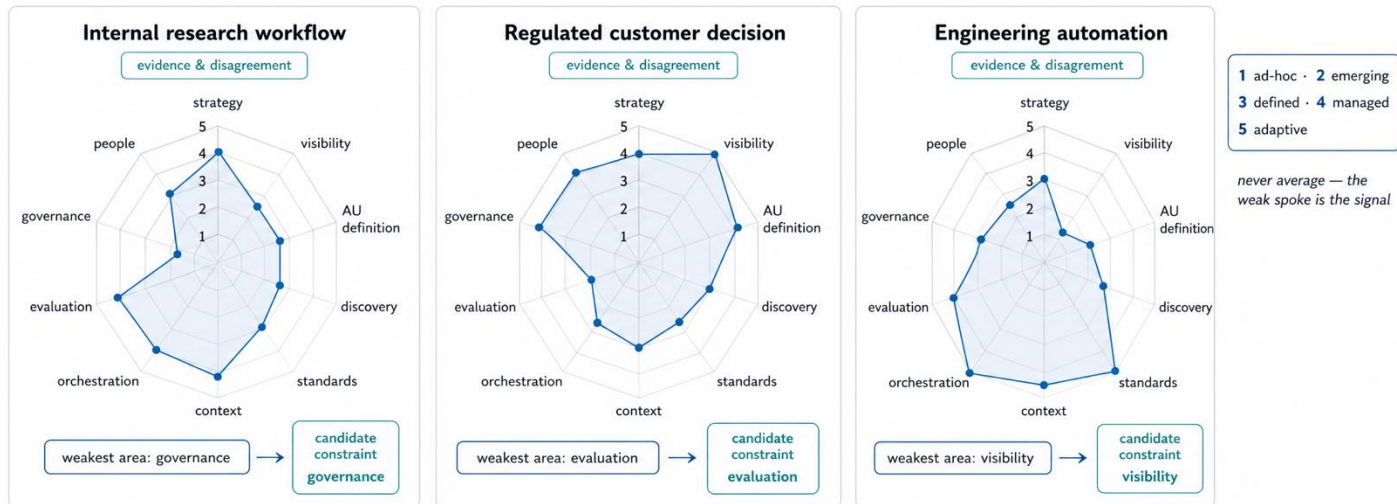

Classify per capability, not per team or topic.

Make the principles yours

Profile the boundary, not the org

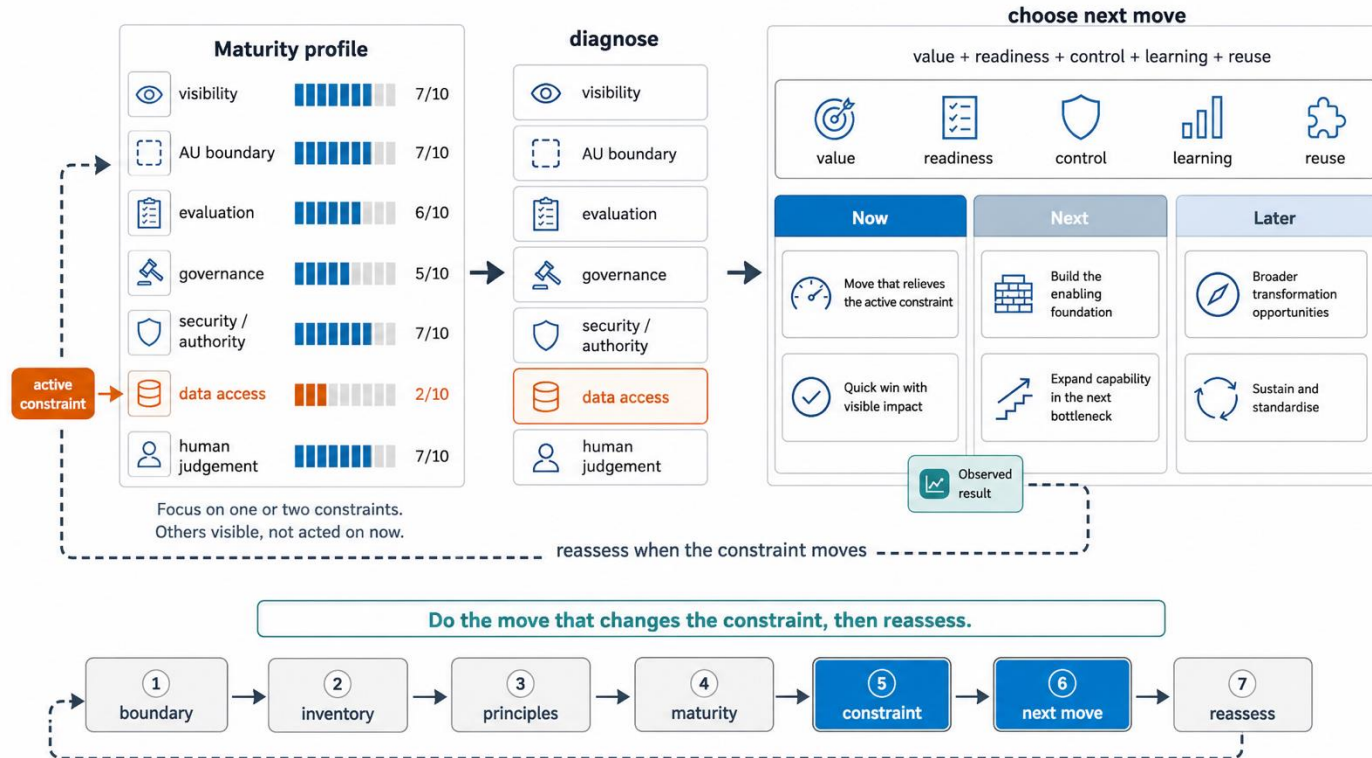

strategy • visibility • AU definition • discovery • standards • context • orchestration • evaluation • governance • people

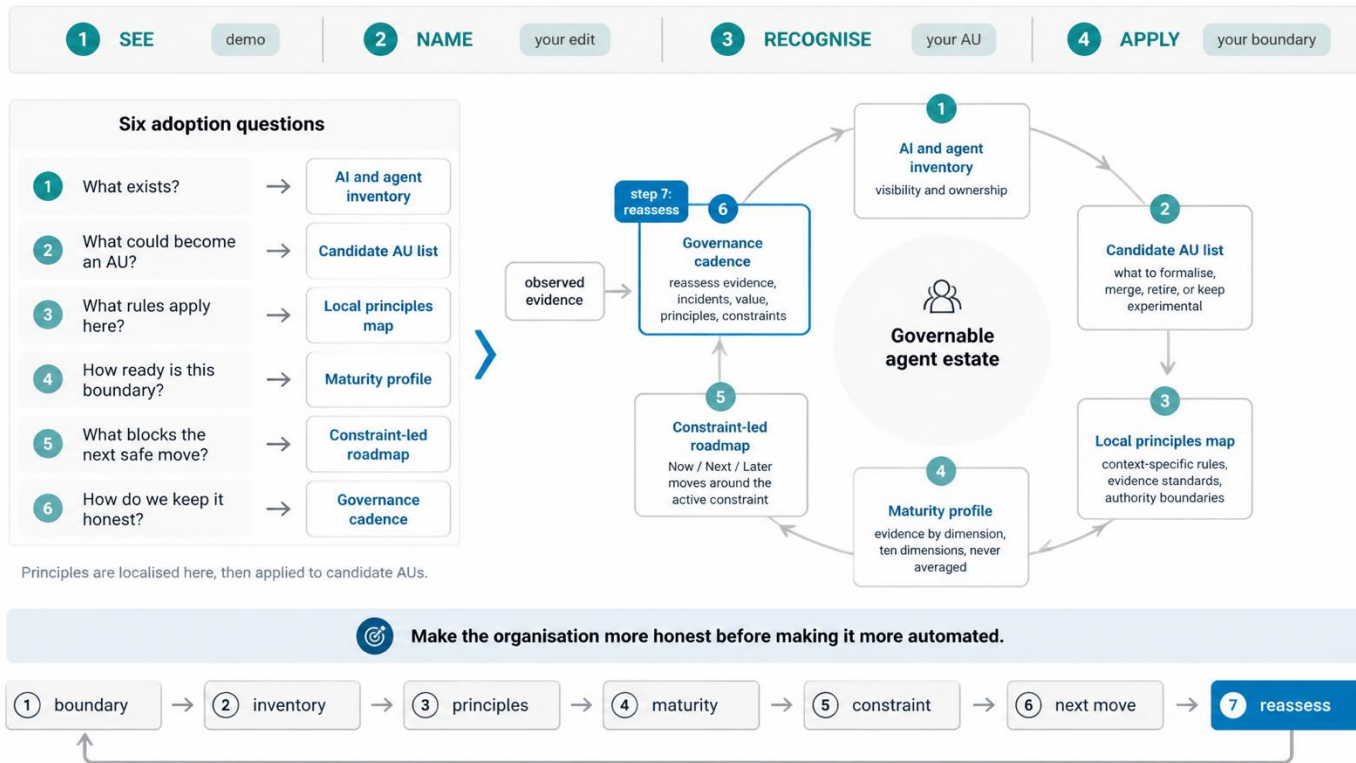

No single score. Profile the boundary. Find the unevenness.

Move the active constraint

Six artefacts make the estate governable

You can now apply the shape

Question	What you now know	Evidence
1 Where is the boundary?	One hidden decision and one reason to change define the unit.	candidate AU + public contract
2 What rules apply here?	Local principles make evidence and authority explicit.	principles map
3 What should change next?	Maturity reveals the active constraint; the roadmap moves one slice.	profile + Now / Next / Later
4 How do we keep it honest?	Inventory, observed evidence and cadence force reassessment.	six adoption artefacts

Handoff

On Monday: choose one slice, draw one AU boundary, require evidence, and make one safe move.
